## 59. DIY desk-top paper crane décor

- materials :
- 1) a paper flying crane ( CHINESE FLYING CRANE ) finished model
  - 2) the column base of a CD/DVD re/writable discs container ( 50 ps)
  - 3) 2 pieces of strong magnet ( about 1cm in diameter )
  - 4) double-sided foam type adhesive tape

process : First , invert the column base and insert one piece of magnet into the tunnel until it reaches the bottom . Then while holding the paper crane upside-down with the other piece of magnet placed on its back , stick the abdomen of the paper crane towards the tip of the column. When the magnets come into stable mutual attraction , bring the inverted base into natural upright position. The tilting of the crane can be adjusted by placing a small piece of the double-sided adhesive tape between the column tip and the paper crane's abdomen . If no suitable magnet is available , the application of the adhesive tape alone will also secure the paper crane into a desired posture . However , if permanent stability is to be achieved , the use of magnet is highly recommended.
