# Lazy Winston

This design of mine is an Adaptation of a traditional design called the 'Lazy Susan' and I wondered how it would look folded from a hexagon rather than a square. Unexpectedly, the folding turned out to be simpler than from a square! Relatively few designs starting from a hexagon are simple – it's an inconvenient shape to create accurately. One of the simplest methods for creating the required 60-degree angle is to create a simple template, as shown in this sequence.
